It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTE: This is a 'working draft' sequence. It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 9 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the condigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 156585;

It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

                                                                                                                                                                                                                                           * NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. The true order of the pieces is a not known and their order in this sequence record is a rubitrary. Where the contigs adjacent to the vector can elaentified, they are labelled with 'clone_end' in the feature table. Some order and orientation information or contigs. These are labelled as part of the same contigs. These are labelled as part of the same 'fragment_chain', and the order and relative orientation of the pieces within a fragment_chain is reflected in this file. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be

```
The present sequence encodes a CASB7435 polypeptide. CASB7435 is homologous to a human N-acetylgalactosamine-alpha2,6-sialyltransferase (GaINAC alpha-2,6-sialyltransferase 1), which is a candidate gene for synthesis of the syalyl-Tn(s-Tn) antigen, a tumour-associated antigen of colorectal cancers. CASB7435 polypeptides and polypeptides are useful for inducing in vitro immune response in cells from the immune system. The activated immune cells are then reinfused for the treatment of diseases such as ovarian, colon, pancreas, kidney, endometrial or gastric cancer or leukemia. CASB7435 is useful for diagnosing a disease, or a susceptibility to disease, particularly colon cancer in a subject related to expression or activity of CASB7435 polypeptide or polynucleotide. CASB7435 polypeptides and polynucleotides are also useful for treating autoimmune diseases and other related conditions.
                                                                                                                                 Novel CASB7435 polypeptides and polynucleotides, useful in diagnosis and as vaccine for prophylaxis, treatment of autoimmune diseases, cancers, particularly ovarian and colon cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 2203 BP; 588 A; 596 C; 555 G; 463 T; 1 other;

AAC98773 to AAC99231 encode the human pancreatic cancer associated proteins, called pancreatic cancer antigens, given in AAB54068 to AAB54466. The human pancreatic cancer antigens given in AAB54008 to AAB54466. The human pancreatic cancer antigens have cytostatic, cancertains, called pancreatic cancer antigens have cytostatic, cytostatic, cardiant and antibilizammatory activities, and can be used in gene therapy. The polynucleotide and proteins can be used for preventing, treating, or ameliorating a medical condition or in assays for diagnosing a pathological condition or a susceptibility to one in a buject. Binding partners to the proteins and the activity of the subject. Binding partners to the proteins and the activity of the subject. Leat or prevent pancreatic disorders, especially cancer. Cytostatic cancer antigens can be used to detect, treat or prevent pancreatic disorders, especially cancer. Agonists and antagonists to the antigens can be used to design nucleic acid hybridisation probes that can be used in chromosome mapping, linkage and diagnostic methods. The proteins can be used to generate antibodies and diagnostic methods the proteins can be used to generate antibodies which are used to purify, detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to purify detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to purify detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to purify detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to prevent neural, immune system, muscular, represent execular, remail or province diagnostic and therapeutic methods and part of prevent including and a variety of present provinces and in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

The invention relates to novel transgenic organisms useful in the production of functional food and drink products for the treatment or production of obesity via the regulation of lipid metabolism. The organisms comprise a polynucleotide encoding a growth hormone fragment capable of stimulating the activity of hormone-sensitive lipase (the key enzyme in lipolysis) and inhibiting acetyl CoA carboxylase (the key enzyme in lipogenesis). The growth hormone fragment preferably contains at least the disulphide-bonded loop of a mammalian growth hormone (but is not the full-length growth hormone) and is optionally linked to an epitope tag or heterologous fusion protein partner. The transgenic organism may be a microorganism used to produce a fermented product corganism may be a microorganism used to produce a fermented product corginism may be used to treat or cell thereof. Food or carbo, lipid metabolism or food use in a mammal. In particular, the food or trait, lipid metabolism or food use in a mammal. In particular, the food or trait, however, the fathlear ration of the invention, the human growth hormone (hGH) fragment analogue AOD9604 was expressed in yeast, optionally fused to the FAGG epitope (AAB73625). The present sequence is described as a DNA sequence from yeast in the constitution of the present sequence is described as a DNA sequence from yeast in the constitution of the present sequence is described as a DNA sequence from yeast in the constitution of the constitution of the present sequence listing, but is not further referred to in the
                                                                                                                                                                                                                                                                              New organisms containing nucleic acid encoding a growth hormone fragment which modulates lipid metabolism are useful to produce dietary aids for obesity and in the meat production industry -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                            This invention describes a novel method for identifying substances which modify activity of hyperpolarization-activated cation channels (HACC), by placing cells which express an HACC in an iso-osmotic sodium ion-free buffer in the presence of a potential-sensitive fluorescent dye, and measuring membrane potential after the addition of sodium ions. The prior art patch-clamp techniques, this invention can be automated, and allows high through put soreening. This sequence encodes the human described in the method of the invention.
Identifying substances which modify activity of hyperpolarization-activated cation channels using fluorescent imaging is useful to identify possible therapeutic pharmaceuticals -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     73 tectgeeqtgtaceageetecageetgeececaggaetgeeetgaeecag-gegegee 131

The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (1) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (1). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB1991202 to AB199912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition improving drugs or therapeutics for ischaemic diseases AB199913 and AB199914
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                condition related sequence

                                                                                               448 ggaaatgagatagatcgatcctcctgcatttggagaatgaacaatgcccccaccaaaggt 507
                                                                                                                                     The sialyltransferase (SST) is useful as an agent for introducing oligosialitic acids such as dir, tri- or tetra-sialite acids into proteins, glycoproteins or glycolipids. It can be used in the treatment of hereditary diseases which involve the lack of enzymes needed for the blosynthesis of specified sugar chains. It can also be used for the prevention of cancerous metastasis, maturation of sperm, inhibition of inflammatory reactions or regeneration and reactivation of nervous tissues. This extracellularly releasable sialyltransferase comprises the active domain of the sialyltransferase described in AAM05300.

Plasmids isolated from human histiocytic leuksemia cell line TYH. Plasmids Isolated from the library were introduced into strain KJM-1. Transformants which became resistant to Ricinus communis 120 lectin were selected and found to contain a 1.9kb CNNA fragment. The "lectin-resistance gene" (EEC) was subcloned and sequenced. The deduced amino acid sequence corresponding to the open reading frame had a structure common to glycosyltransferases. The LEC gene was found to encode alpha2-3 sialyltransferase activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2.8%; Score 36.8; DB 14; Length 1919;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                            The present invention relates to methods for the preparation and use of internal controls for nucleic acid amplification assays. The internal controls a synthetic nucleic acid made by non-recombinant techniques. The internal controls are useful for detecting nucleic acids in a sample such as blood, spinal fluid, semen, saliva, tears, cell quantitative PCR assay, by adding the internal control to the sample, amplifying the nucleic acids in the sample and detecting the amplified products. The internal controls help in performing the nucleic acid amplification assay quickly, and inexpensively without sacrificing assay specificity or sensitivity. The present sequence is one such internal control, which was used in an example to illustrate the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     listing

It is provided in a specification relating to method for decreasing the content of N-acetyllactosamine repeated structure in the sugar chain of a glycoprotein or a glycolipid produced by a cell. The intracellular expression of the sialate transferase gene is increased, and the relative activity of SiaT to the activity of beta-1,3-N-acetylglucosamine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                The invention relates to novel genes (ABAl1004-ABA21534) and proteins (ABBL4678-ABB18001) useful for preventing, treating or ameliorating candical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the geneification. The nucleic acids, proteins, antibodies and (ant)agonists are useful and ovarian cancer and other cancers of the adrend gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune hamolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, aultriples actlerosis, rheumatorid arthritis and ulcerative colliss; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. carebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal only parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention inseful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABB27737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at tp. wipo.int/pub/published_pct_sequences.

                                                                                                                                                                     AAQ82869/R65240 are the nt and AA sequence of porcine Gal beta 1,3 Gal NAc alpha 2,3 sialyltransferase ("alpha 2,3"). The nt sequence of the porcine alpha 2,3"-0 mRNA was determined from DNA sequence analysis of two overlapping clones, lambda ST1 and lambda ST2. The proposed signal anchor sequence and glycosylation slites are indicated in FT. The sequence corresp. to the long form of the alpha 2,3 slalyltransferase, econded by overlapping clones lambda ST1 and lambda ST2. A DNA isolate which encodes porcie ST30 sialyltransferase and an essentially pure porcine ST30 sialyltransferase

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The restore normal activity of (II) is useful in gene therapy techniques for identifying expressed genes. (I) is useful in gene therapy techniques for restore normal activity of (II) or to treat disease states involving quantitating a polypeptide in tissue, as molecular weight markers and as quantitating a polypeptide in tissue, as molecular weight markers and as in food supplement. (II) and its binding partners are useful in reating disorders involving aberrant protein expression or biological activity. The polypeptide and polymelectide sequences have applications in the polypeptide and polymelectide sequences have applications in caponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostics. Assetly7-Assy4564 represent novel human clay acquences of this patent did not appear in the printed the was obtained in electronic format directly from WIPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; nootropic; neuroprotective; cytostatic; dermatological; virucide; immunosuppressive; antiliflammatory; anti-HIV; antibacterial; vulnerary; antiparkinsonian; antisickling; antianeemic; antiarthritic; cancer; antirheumatic; hepatotropic; cerebroprotective; antiinflammatory; antiriallergic; antidiabetic; antidiabetic; antidualcer; anticonvulsant; antifundal; anticparastic; cardiant; immune disorder; cardiovascular disorder;

                                                                                                                                                                                                                                             Human Gal beta 1,3GalNAc alpha 2,3 sialyltransferase is also called human ST30. In order to clone human ST30 sialyltransferase two degenerate oligos were synthesised (AAG82880 AAG82881). For PCR amplification, first strand cDNA synthesised from human placenta or human fetal brain total RNA was combined with each primer. 8/50 clones obtd. from human placenta were judged to contain the human ST30 sialylmotif as judged by homology with the portine sequence. A human placenta cDNA library was screened with the cloned PCR fragment. Characterisation of the positive clones revealed cDNA of two types which differed in their 5' ends. The nt shown in AAG82873. -37 and is

The present invention describes primer sets for synthesising 5602
full-leangth count of the Specification. Where a primer set
comprises: (a) an oligo-dr primer and an oligonucleotide complementary of the complementary strand of a polynucleotide which comprises one of
the 5602 nucleotide sequences defined in the specification, where the
oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to a
polynucleotide which comprises a 3'-end sequence, where the
complementary strand of a sequence is selected from those defined in
the specification. The primers are useful for synthesistaly polynucleotides,
particularly full-length cDNAs. The primers are also useful for the
che full-length cDNAs. The primers are also useful for the
che full-length cDNAs. The primers are also useful for the
challs are not any special lased methods. Anio3166 to Anii3638
Anii3633 to Anii86393 represent human amino acid sequences; and Anii3629 to Anii3632
represent oligonucleotides, all of which are used in the exemplification
of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                            tgtgacctttgtgccatagtgtcaaactcaggtcagatggttggccagaaggtgggaaat 453
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 626 BP; 122 A; 213 C; 172 G; 107 T; 12 other;

Nucleic acids encoding human immune/hematopoletic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Disclosure; SEQ ID NO 32987; 3071pp + Sequence Listing; English

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
colynucleotides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic related diseases, especially
cancers and cancer metastases of haematopoietic derived cells. AAK64703
to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54942 to AAK64550 and AAM82169
ceptesent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. In the micleic acids, proteins, antibodies and (ant)agonists are useful. In the diagnosis, treatment and prevention of: (a) cencer, e.g. breast and ovarian cancer and other cancers of the adrend gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogental; (b) immune disorders e.g. Addison's disease, allerafes, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) infections diseases such as myocardial ischaemias; and parasitic infections diseases such as viral, bacterial, fungal Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; SEQ ID NO 13688; 1701pp + Sequence Listing; English.

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful of a gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous coststem, such as peripheral nervous injuries, peripheral nervopathy and collised neuropathies and central nervous system diseases, such as a peripheral nervous system diseases, such as a clateral sclerosis, and Shy Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, hamostratic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and const affects and activity, arthritis and inflammation, leukaemias and const affects and activity, arthritis and inflammation, leukaemias and const affects and therapy drug screening, specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer;

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polyeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous system, such as peripheral nervous system diseases, such as Alzheimer's, parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the Activities such as: Immune system suppression and thrombolytic activity, chemotactic/chemothetic activity, hemotactic/chemothetic activity, and thrombolytic activity, and inflammation, leukaemias and Note. The security activity and inflammation, leukaemias and Note. The security activity activity and inflammation, leukaemias and Note. The security activity activity activity and inflammation, leukaemias and Note.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           394 tgtgacctttgtgccatagtgtcaaactcaggtcagatggttggccagaaggtgggaaat 453

The human secreted proteins given in AAB08891 to AAB08984. The human secreted proteins can have activities based on the tissues and cells they are expressed in. Examples of the activities are: cytostatic; anti-proliferative; immunosuppressive; antibacterial; and vulnerary. The secreted proteins and their related polynucleotide sequences are useful for diagnostic and therapeutic methods useful for diagnosing and treating disorders related to the secreted proteins. The proteins, and commune system, hyperproliferative disorders, infectious disease, immune system, hyperproliferative disorders, infectious disease, capacity of tissues, for chemotaxis and for screening molecules that used as food additives or preservatives, to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, co-factors or other nutritional components. Agonists or antagonists of the proteins and bypervascular diseases. AAA39043 to AAA39051

Sequences AAS45925-AAS46231 represent DNA molecules encoding and PCR primers for PRO Polypeptides of the invention. The sequences of the invention. The sequences of the invention can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal ecells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, piss, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TMP) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of thondrocyte cells. The stimulate the broadeness, prostate, presence of tumours and also susceptibility to tumour development, particularly adrenal, lung, colon, breast, prostate, prestate, prestate, prestate, prestate, prestate, prestate, prestate, prestate, prostate, cells. The subjects. The oligonucleotide probes specific for the PRO nucleic acids.
                                                                                                                                                 Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumours, such as prostate and breast tumours, in mammals and to screen for modulators of the compounds .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to secreted and transmembrane proteins. These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of anti-sense RNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    394 tytgacctttgtgccatagtgtcaaactcaggtcagatggccagaaggtgggaaat 453
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            454 gagatagatcgatcctcctgcatttggagaatgaacaatgcccccaacaaaggttatgaa 513

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                receptor or secreted PRO polypeptides given in AAY99340 to AAY99462. The receptor or secreted PRO polypeptides given in AAY99340 to AAY99462. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences encoding then have various industrial applications, including uses as pharmaccutical and diagnostic agents. AAA37145 to AAA37330 represent PCR primers and hybridisation probes used in the isolation of the PRO polypeptides from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New mammalian DNA sequences encoding transmembrane, receptor or secreted PRO polypeptides, useful for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 394 tgtgacctttgtgccatagtgtcaaactcaggtcagatggttggccagaaggtgggaaat 453

The present invention describes primer sets for synthesising 5602

[ull-length cDNAs defined in the specification. Where a primer set

[ull-length cDNAs defined in the specification. Where a primer set

[ull-length cDNAs defined in the specification complementary

[ull-length comprises at least 15 nucleotide which comprises one of

[ull-length comprises at least 15 nucleotides; or (b) a combination

[ull-length strand of a polynucleotide which comprises a 5'-end

[ull-length which comprises a 3'-end sequence complementary to the

[ull-length which comprises a 3'-end sequence complementary to a

[ull-length which comprises a 3'-end sequence on the combination of

[ull-length which comprises a 3'-end sequence of sequence of 15 nucleotides and the combination of

[ull-length which comprises a 3'-end sequence of 15 nucleotides and the combination of

[ull-length cDNAs. The primers are useful for synthesising polynucleotides,

[ull-length cDNAs. The primers are also useful for the

[ull-length cDNAs. The primers allow obtaining of the full-length

[ull-length cDNAs. The primers allow obtaining of the full-length

[ull-length cDNAs. The primers allow obtaining of the full-length

[ull-length cDNAs. The primers allow obtaining of the full-length

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; corporatic; antiparkinsonian; nootropic; neuroprotective; corporatic; antipornulsant; antiarthritic; immunosuppressant; immunostimilant; cardiant; thrombolytic; coaqulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressant; antidiabetic; hypotensive; dermatological; immunosuppressalve; antidiabetic; hypotensive; dermatological; immunosuppressalve; antidiabetic; pypotensive; dermatological; immunosuppressalve; cantidiabetic; pypotensive; dermatological; antiviral; antiviral; antirheumatic; antidiabetic; pypotensive; dermatological on on predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids and be used to express ORFX proteins in gene therapy cetors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus carthematosus, severe combined immunodeficiency (SCID), AIDS, viral, batchers, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous system, such as peripheral nervous system callsed neuropathies and central nervous system diseases, such as Alzheimer's parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activity, chemotractic/chemokinetic activity, haemostatic assays for receptor activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and the contraction of the contraction of the contraction of the contractivity, and inclammation, leukaemias and the contraction of the contractivity activity and inflammation, leukaemias and the contraction of the contractivity and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            he sequence data for this patent did not form part of the printed

                                                           07-NOV-2001 (first entry)
                                                                                                                                                                                                                                          WO200157182-A2
                AAK78174:
  The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliocating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)spanists are useful.

The nucleic acids, proteins, antibodies and (ant)spanists are useful.

In the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's cilsease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases such as wiral, bacterial, fungal and parasitic infections.

Con hear the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at ftp.Wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ó

                                                                           The present invention relates to an isolated nucleic acid comprising a thorseold sequence coding for a full-length mammalian GM3 synthase or their biologically active polypeptide fragment. It is also useful as a size marker in nucleic acid or protein electrophoresis or chromatography and for detecting expression of sialyltransferase (ST) in whole organs, tissue or cells. The nucleic acid probes can also be used to detect, quantitate or isolate a mammalian sialyltransferase nucleic acid in a test sample or to identify slalyltransferase homologues, as oligonuclectide probe e.g. in polymerase chain reaction differential display, in combination with cDNA libraries, expression libraries, etc. The nucleic acid can be modified to make it resistant to cellular enzymes, oxidation, reduction, nucleases, etc. Or to enhance its uptake into cells. The present sequence is human sialyltransferase, 78T6 Gal V
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; nootropic; neuroprotective; cytostatic; dermatological; virucide; immunosuppressive; antilinflammatory; anti-Hry; antibacterial; vulnerary; antiparkinsonlan; antisickling; antianaemic; antiaribritic; cancer; antirheumatic; hepatotropic; cerebroprotective; antilinflammatory;

                                                   The polynucleotide sequence given in AAA78881 to AAA78432 encode the numan secreted proteins given in AAB24437 to AAB24604. Human secreted proteins given in AAB24437 to AAB24604. Human secreted proteins divided by the tissues and cells the genes are expressed in Examples of activities include: cytostatic; antianaemic; antidabetic; antilhilammatory; ophthalmological; antitheumatic; antianatory; ophthalmological; antitheumatic; antiantic; antipsoriatic; antimicrobial and antiparkinsonian.

Human secreted protein polynucleotides, polypeptides, antagonists and/or agonists may be useful in treating, preventing, and/or diagnosing other disorders and/or conditions such as: (a) cancers; (b) disorders of the immune system; (c) anglogenesis disorders; (d) disorders of the immune system; (e) cardiovascular disorders; (f) diseases associated with increase apoptosis; (g) neurological diseases; and should the also used to promote wound healing.

AAA78372 to AAA78380 and AAB2446 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         512

The invention relates to human nucleic acids (AAI57788-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, hamostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S. disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                        Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral scleroslis; Shy-brager Syndrome; chemotactic; chemotactic; thrombolytic; drug screening; arthritis; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel nucleic acids and polypeptides, useful for treating disorders such as central nervous system injuries .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ren F, W

invention have hydrophobic domains and can be used for the treatment of various immune deficiencies and disorders, such as severe combined immunodeficiency (SCID), multiple sclerosis, rheumatoid arthritis, autoimmune pulmonary inflammation, graft-versus-host disease and cullain-barre syndrome. The proteins may also be useful in the treatment of allergic reactions and conditions, such as asthma and in regulation of allergic reactions and conditions, such as asthma and in regulation of utility in compositions used for bone, cartilage, tendon and/or nerve tissue growth or regeneration as well as wound healing and in the periodontal disease and in other tooth repair processes. Other uses include treatment of turnons. The proteins may be used in the treatment of thrombolytic and haemostatic conditions, treatment or prevention of tumours and inhibiting infection by bacteria, viruses, fungl and other parasites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     agttggtatctatccgaatgcccaaatatacgtgaccacagagaagcgcatgagttactg 752

This sequence represents human cDNA encoding a secreted protein. The invention relates to sequences AAA87725-A87774 which encode human cluvention relates to sequences AAA87725-A87774 which encode human secreted proteins and aba25763-B25812. The proteins include signal peptides. Included in the invention are a host cell containing one of the cDNA sequences, and a purified antibody capable of binding to one of the secreted proteins. Also contained in the invention are methods for storing the sequence data on a computer system, and a method for identifying features of the cDNA sequences using a computer programme. The cDNAs may also be useful in diagnostic, forensic, gene proteins. The cDNAs may also be useful in diagnostic, forensic, gene therapy and chromosome mapphing procedures and may be used to design expression vectors and secretion vectors. The proteins of the invention may be used to treat diseases including cancer, autoimmune diseases, cardiovascular discorders, cystic fibrosis, hypothyroidism, immunological disorders, amyloidosis, brain disorders, sheletal muscle disorders, eye disorders, graft rejection, Alzheimer's disease.
                                                                                                                                                                                                                                           Human; secreted protein; forensic procedure; gene therapy; chromosome mapping; cancer; autoimmune disease; cardiovascular disorder; cystic fibrosis; hypothyroidism; immunological disorder; amyloidosis; brain disorder; skeletal muscle disorder; eye disorder; obestry; mitochondriocytopathy; diabetes; atherosclerosis; Alzheimer's disease; neurodegenerative disorder; graft rejection; dementia; hyperlipidaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Polynucleotides and polypeptides encoding proteins with signal peptides, useful in diagnostic, forensic, gene therapy and chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1556 BP; 287 A; 521 C; 460 G; 288 T; 0 other;

The present invention relates to human proteins (AAAB6160B-AAB61617) and the present invention have hydrophobic domains and can be used for the treatment of invention have hydrophobic domains and can be used for the treatment of various immune deficiencies and disorders, such as severe combined immunodeficiency (SCID), multiple sclerosis, rheumatoid arthritis, autoimmune pulmonary inflammation, graft-versus-host disease and callian-Barre syndrome. The proteins may also be useful in the treatment of allergic reactions and conditions, such as asthma and in regulation of haematopoiesis or lymphoid cell deficiencies. The proteins may also have utility in compositions used for bone, cartilage, tendon and/or nerve treatment of burns. The proteins may be used in the treatment of purns. The proteins may be used in the treatment of alsease and in other tooth repair processes. Other uses include treatment of thrombolytic and haemostatic conditions, treatment or prevention of tumours and inhibiting infection by bacteria, viruses, very

The present cDNA sequence encodes a human carbohydrate-modifying enzyme (CME). CME polynucleotides and polypeptides are useful for treating and diagnosing diseases associated with CME such as diabetes, and diseases associated with CME such as AIDS, Addison's disease, autoimmune furfilammancory distress syndrome, allergies, anaemia, asthmat, atheroscierosis, autoimmune thyroiditis, bronchitis, cholocystitis, contact dermatitis, Crohn's disease, emphysema, erythrobiastosis fetalis, glomerulonephritis, Good pasture's syndrome, gout, Grave's disease, isolmetulonephritis, Good pasture's syndrome, gout, Grave's disease, Harbimot's thyroiditis, multiple sclerosis, myasthenia gravis, sclerosis, pancreatitis, polymyositis, psoriasis, Reiter's syndrome, arthritis, scleroderma, sjogren's syndrome, complications of cancer, memodialysis, and extracorporeal circulation, viral, bacterial, fungal parastitic, protozoal, and helminthic infections, trauma, or cancer. CME, or its catalytic or immunogenic fragment, is
